### ***Reasons For Allowance***

The following is an examiner's statement of reasons for allowance: claim 1 defines a pressing iron having a water reservoir and a filling orifice. The filling orifice is provided with a cover having a closing face, which is movable, by a first push to open an orifice for the filling of the reservoir with water. The pushing onto the closing face occurring perpendicular to the cover face. A means is provided for allowing movement during the first push and for retaining the cover depressed in the orifice while allowing the filling of the reservoir with water. A second push releases the means and closes the visible closing face of the cover for stopping the filling of the reservoir. The dependent claims further limit the structure of the iron of the independent claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Pertinent Citations***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Downey et al. '695 illustrates a push button valve including a closing face, which is pushed once, which opens a valve at the far end of the closing face. The closing face biased such that it moves upwards after every push. Downey et al. '815 illustrates a push button, which is pushed for closing a fluid path and pushing the button again for opening the fluid path. The button is maintained depressed while closing and maintaining the outlet closed. Kao illustrates a rod, which is actuated by

pressure for opening and closing a valve. The rod drops by gravity after every push.

Kawasaki et al., Beverly et al., Schott et al., and Murphy illustrate irons including filling orifice covers which are movable or pivotable or slidable for closing and opening the orifices of the reservoirs
